Application Serial No. 10/508,885
Reply to Advisory Action of November 5, 2009PATENT
Docket: CU-3914**Amendments to the Specification**

Please replace the second full paragraph on page 35 of the specification as filed with the following amended paragraph:

Normal folding shoes ~~[[61]]~~ **161** provided on both sides of the deck **110** along the margins of the front surface covering base paper **14** fold both margins of the front surface covering base paper **14** upward, and then fold parts of both margins onto the slurry. The folding shoes ~~[[61]]~~ **161** form the opposite long sides of the finished board. Then, the back surface covering base paper **16** is put on the core **60** and the parts of the margins of the front surface covering base paper. The back surface covering base paper separates from a providing roll **64** (not shown in the figure), passes under the molding machine **200** for guiding the back surface covering base paper, making the upper surface of the slurry be smooth, and making the thickness of the slurry be a desired value. In the finished product, the front surface covering base paper **14** makes a front surface and side surfaces of the plaster board that is formed according to the standard, and the back surface covering base paper **16** makes a back surface of the plaster board that is formed according to the standard.
